

Solution Document

في البداية نقوم بإنشاء المشروع الأساسي ومشروع الاختبار ضمن sln:

```
PS D:\Study\Software_Engineering_2\LoanApp> dotnet new sln -n LoanApp
The template "Solution File" was created successfully.

PS D:\Study\Software_Engineering_2\LoanApp> dotnet new classlib -n LoanApp.Core
The template "Class Library" was created successfully.

Processing post-creation actions...
Restoring D:\Study\Software_Engineering_2\LoanApp\LoanApp.Core\LoanApp.Core.csproj:
  Determining projects to restore...
  Restored D:\Study\Software_Engineering_2\LoanApp\LoanApp.Core\LoanApp.Core.csproj (in
  133 ms).
Restore succeeded.

PS D:\Study\Software_Engineering_2\LoanApp> dotnet new xunit -n LoanApp.Tests
The template "xUnit Test Project" was created successfully.

PS D:\Study\Software_Engineering_2\LoanApp> dotnet sln add LoanApp.Core/LoanApp.Core.cspr
oj
Project `LoanApp.Core\LoanApp.Core.csproj` added to the solution.
PS D:\Study\Software_Engineering_2\LoanApp> dotnet sln add LoanApp.Tests/LoanApp.Tests.cs
proj
Project `LoanApp.Tests\LoanApp.Tests.csproj` added to the solution.
PS D:\Study\Software_Engineering_2\LoanApp> dotnet add LoanApp.Tests/LoanApp.Tests.cspro
j reference LoanApp.Core/LoanApp.Core.csproj
Reference `..\LoanApp.Core\LoanApp.Core.csproj` added to the project.
```

بعد ذلك نقوم بكتابة الكود التالي في LoanEvaluator.cs:

```
LoanApp.Core > LoanEvaluator.cs > LoanEvaluator > GetLoanEligibility
1 namespace LoanApp;
2 public class LoanEvaluator
3 {
4     1 reference
5     public static string GetLoanEligibility(int income, bool hasJob, int creditScore, int dependents, bool ownsHouse)
6     {
7         if (income < 2000)
8             return "Not Eligible";
9
10        if (hasJob)
11        {
12            if (creditScore >= 700)
13            {
14                if (dependents == 0)
15                    return "Eligible";
16                else if (dependents <= 2)
17                    return "Review Manually";
18                else
19                    return "Not Eligible";
20            }
21            else if (creditScore >= 600)
22            {
23                if (ownsHouse)
24                    return "Review Manually";
25                else
26                    return "Not Eligible";
27            }
28            else
29                return "Not Eligible";
30        }
31        else
32        {
33            if (creditScore >= 750 && income > 5000 && ownsHouse)
34                return "Eligible";
35            else if (creditScore >= 650 && dependents == 0)
36                return "Review Manually";
37            else
38                return "Not Eligible";
39        }
40    }
}
```

: Cyclomatic Complexity التعقيد بحساب

```
LoanApp.Core > LoanEvaluator.cs > LoanEvaluator > GetLoanEligibility
1 namespace LoanApp;
2 public class LoanEvaluator
3 {
4     public static string GetLoanEligibility(int income, bool hasJob, int creditScore, int dependents, bool ownsHouse)
5     {
6         if (income < 2000) 1
7             return "Not Eligible";
8
9         if (hasJob) 2
10        {
11            if (creditScore >= 700) 3
12            {
13                if (dependents == 0) 4
14                    return "Eligible";
15                else if (dependents <= 2) 5
16                    return "Review Manually";
17                else
18                    return "Not Eligible";
19            }
20            else if (creditScore >= 600) 6
21            {
22                if (ownsHouse) 7
23                    return "Review Manually";
24                else
25                    return "Not Eligible";
26            }
27            else
28                return "Not Eligible";
29        }
30        else
31        {
32            if (creditScore >= 750 && income > 5000 && ownsHouse) 8 9 10
33                return "Eligible";
34            else if (creditScore >= 650 && dependents == 0) 11 12
35                return "Review Manually";
36            else
37                return "Not Eligible";
38        }
39    }
40 }
```

CC = D + 1
CC = 12 + 1 = 13
تعقيد عال

نلاحظ التعقيد المرتفع الذي يبلغ 13 وللتأكد من ذلك نستخدم الأداة :codalyze

Code Complexity Report

لحل المشكلة وتخفيض التعقيد نطبق ال refactoring وذلك لفصل الوظائف:

```
1 namespace LoanApp.Core;
2
3 1 reference
4 public static class LoanEvaluator
5 {
6     1 reference
7     public static string GetLoanEligibility(int income, bool hasJob, int creditScore, int dependents, bool ownsHouse)
8     {
9         1
10        if (IsLowIncome(income))
11            return "Not Eligible";
12
13        2
14        if (hasJob)
15            return EvaluateEmployed(creditScore, dependents, ownsHouse);
16        else
17            return EvaluateUnEmployed(income, creditScore, dependents, ownsHouse);
18    }
19
20    1 reference
21    private static bool IsLowIncome(int income) => income < 2000;
22
23    1 reference
24    private static string EvaluateEmployed(int creditScore, int dependents, bool ownsHouse)
25    {
26        if (creditScore >= 700)
27        {
28            if (dependents == 0) return "Eligible";
29            else if (dependents <= 2) return "Review Manually";
30            return "Not Eligible";
31        }
32
33        else if (creditScore >= 600)
34            return ownsHouse ? "Review Manually" : "Not Eligible";
35
36        return "Not Eligible";
37    }
38
39    1 reference
40    private static string EvaluateUnEmployed(int income, int creditScore, int dependents, bool ownsHouse)
41    {
42        if (creditScore >= 750 && income > 5000 && ownsHouse)
43            return "Eligible";
44
45        38
46        else if (creditScore >= 650 && dependents == 0)
47            return "Review Manually";
48
49        return "Not Eligible";
50    }
51 }
```

$CC = D + 1$
 $CC = 2 + 1 = 3$

LoanEvaluator::GetLoanEligibility	5	14	3

Source Code: f68c3214-4ef5-11f0-8edb-263d64ae3d6b.cs

Generated by Codalyze on 2025-06-2

العمل تم على مبدأ مثال المحاضرة وهو Single Responsibility لقد قمنا بتخفيض التعقيد من خلال فصل التابع الرئيسي إلى ثلاث حالات وهي income ,has job, not has job ومن ثم داخل كل منها قمنا باستدعاء التوابع المساعدة التي وضعناها فيها ال logic وهي:

- IsLowIncome
- EvaluateEmployee
- EvaluateUnEmploye

وهكذا وصلنا بتعقيد التابع الرئيسي إلى القيمة 3.

نكتب هنا توابع اختبار التابع الرئيسي الذي أصبح بالشكل التالي بعد نقل التوابع المساعدة إلى ملف ثان:

```
LoanApp.Core > LoanEvaluator.cs > LoanEvaluator > GetLoanEligibility
1 namespace LoanApp.Core;
2
3 references
4 public static class LoanEvaluator
5 {
6     3 references
7     public static string GetLoanEligibility(int income, bool hasJob, int creditScore, int dependents, bool ownsHouse)
8     {
9         if (IsLowIncome(income))
10             return "Not Eligible";
11
12         if (hasJob)
13             return LoanEvaluatorHelpers.EvaluateEmployed(creditScore, dependents, ownsHouse);
14         else
15             return LoanEvaluatorHelpers.EvaluateUnEmployed(income, creditScore, dependents, ownsHouse);
16     }
17
18     1 reference
19     private static bool IsLowIncome(int income) => income < 2000;
20 }
```

```
LoanApp.Tests > LoanEvaluatorTests.cs > LoanEvaluatorTests > GetLoanEligibility_Should_Return_Eligible_When_UnHasJob
1 namespace LoanApp.Tests;
2
3 using LoanApp.Core;
4
5 0 references
6 public class LoanEvaluatorTests
7 {
8     [Fact]
9     0 references
10     public void GetLoanEligibility_Should_Return_NotEligible_When_Income_Low()
11     {
12         var result = LoanEvaluator.GetLoanEligibility(1500, true, 800, 5, true);
13         Assert.Equal("Not Eligible", result);
14     }
15
16     [Fact]
17     0 references
18     public void GetLoanEligibility_Should_Return_ReviewManually_When_HasJob()
19     {
20         var result = LoanEvaluator.GetLoanEligibility(2200, true, 800, 2, true);
21         Assert.Equal("Review Manually", result);
22     }
23
24     [Fact]
25     0 references
26     public void GetLoanEligibility_Should_Return_Eligible_When_UnHasJob()
27     {
28         var result = LoanEvaluator.GetLoanEligibility(5500, false, 800, 2, true);
29         Assert.Equal("Eligible", result);
30     }
31 }
```

قمنا بكتابة ثلاث توابع اختبار أولها لحالة LowIncome والثانية HasJob والثالثة UnHasJob ونلاحظ تحقق العلاقة التالية:

• عدد حالات الاختبار الدنيا المطلوبة ≤ قيمة CC

بعد ذلك ننتقل إلى العمل مع التوابع المساعدة التالية:

```
LoanApp.Core > LoanEvaluatorHelpers.cs > LoanEvaluatorHelpers
1 namespace LoanApp.Core,
2
3 6 references
4 public static class LoanEvaluatorHelpers
5 {
6     3 references
7     public static string EvaluateEmployed(int creditScore, int dependents, bool ownsHouse)
8     {
9         if (creditScore >= 700)
10         {
11             if (dependents == 0) return "Eligible";
12             else if (dependents <= 2) return "Review Manually";
13             return "Not Eligible";
14         }
15         else if (creditScore >= 600)
16             return ownsHouse ? "Review Manually" : "Not Eligible";
17         return "Not Eligible";
18     }
19
20     3 references
21     public static string EvaluateUnEmployed(int income, int creditScore, int dependents, bool ownsHouse)
22     {
23         if (creditScore >= 750 && income > 5000 && ownsHouse)
24             return "Eligible";
25         else if (creditScore >= 650 && dependents == 0)
26             return "Review Manually";
27         return "Not Eligible";
28     }
29 }
30 }
```

نقوم بإنشاء ملف LoanEvaluatorHelpersTests.cs في مشروع الاختبار ونكتب فيه بعض
توابع الاختبار منها:

```
LoanApp.Tests > LoanEvaluatorHelpersTests.cs > LoanEvaluatorHelpersTests > EvaluateEmployed_Should_ReturnReviewManually_When_ScoreC
1 namespace LoanApp.Tests;
2 using LoanApp.Core;
3
4 public class LoanEvaluatorHelpersTests
5 {
6     [Fact]
7     public void EvaluateEmployed_Should_ReturnNotEligible_When_ScoreOver700AndMoreTwoDependents()
8     {
9         var result = LoanEvaluatorHelpers.EvaluateEmployed(800, 5, true);
10        Assert.Equal("Not Eligible", result);
11    }
12
13    [Fact]
14    public void EvaluateEmployed_Should_ReturnReviewManually_When_ScoreOver600AndOwnsHouse()
15    {
16        var result = LoanEvaluatorHelpers.EvaluateEmployed(650, 5, true);
17        Assert.Equal("Review Manually", result);
18    }
19
20    [Fact]
21    public void EvaluateUnEmployed_Should_ReturnEligible_When_ScoreOver750AndInComeOver5000AndOwnsHouse()
22    {
23        var result = LoanEvaluatorHelpers.EvaluateUnEmployed(5500, 1000, 2, true);
24        Assert.Equal("Eligible", result);
25    }
26
27    [Fact]
28    public void EvaluateUnEmployed_Should_ReturnReviewManually_When_ScoreOver650AndNoDependents()
29    {
30        var result = LoanEvaluatorHelpers.EvaluateUnEmployed(3000, 1000, 0, true);
31        Assert.Equal("Review Manually", result);
32    }
33
34 }
```

حيث يوجد تابعين لتقييم كل من التابع EvaluateEmployee والتابع
EvaluateUnEmploye ببعض الحالات.

الان لو قمنا بتنفيذ dotnet test سنحصل على النتيجة وهي نجاح جميع حالات الاختبار:

```
TERMINAL
PS D:\Study\Software_Engineering_2\LoanApp> dotnet test
